

Technology at OLG

OLG provides the learning tools and resources that students need. In our tech lab, dozens of computers are utilized by students every day in each grade level (Pre-K through 8th grade). Each grade meets once a week for direction from Mrs. Jacky Hanner. She instructs the younger children using drawing programs and keyboarding (including programs such as Kid Pix and DanceMat), and they learn and grow with educational on-line tools.

Older students create digital photo slideshows with special effects and soundtracks in PhotoStory3. Animoto and Prezi also enable students to share ideas creatively. These programs and others are used to integrate lessons and to emphasize what is being taught in core classroom subjects. Mrs. Hanner serves as a catalyst as children gain learning enrichment during tech lab and collaborate on group projects.

Students in middle school classes obtain lasting knowledge with an introduction to Microsoft Office, including PowerPoint, Excel, Access, Publisher and Word. All students continually improve their keyboarding skills and develop safe internet habits. You will be amazed at what OLG students can do!
